NOTE: This exam has been edited due to two incorrect questions from the semester in which it was given. You can expect the exam for this semester to be slightly longer.

### Question 1 0.5 pts

Which of the following translates Python code into machine code for a given instruction set?

CPU

Virtual machine

Interpreter

Operating system

Version control system

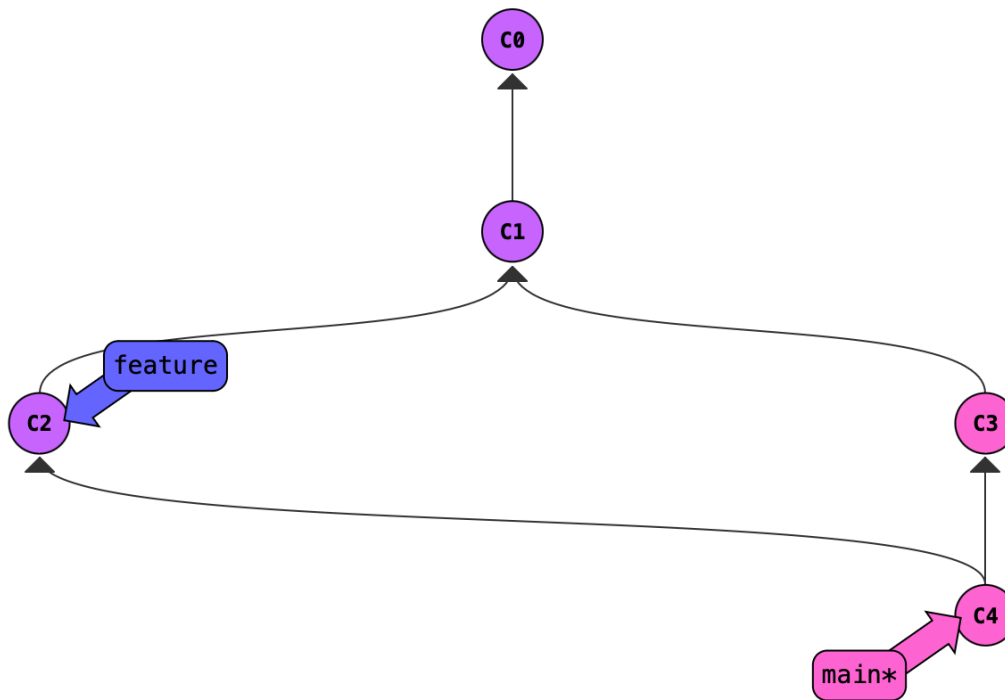

### Question 2 1 pts

**Image 1:**

**Image 2:**

Suppose you have the git setup pictured in **Image 1** (two branches named *feature* and *main* with different commits and *HEAD* pointing to *feature*). Which git command(s) would produce the setup shown in **Image 2**? (Assume commands on separate lines are entered sequentially).

Hint: Please note where the head is currently pointing to.

☐

git checkout main

git merge feature

☐

git merge feature

☐

git checkout main

☐

git checkout main

git pull

Question 3 1 pts

Let  $n$  be an integer. What is the time complexity of the following code snippet?

```
nums = []
```

```
for i in range(n):
```

```
    nums.insert(0, i)
```

☐
 $O(1)$ 
☐
 $O(n)$ 
☐
 $O(\log n)$ 
☐
 $O(n^2)$ 

Question 4 1 pts

True or False, if a function  $f(n)$  is in  $O(\frac{1}{2}n^2)$  then  $f(n)$  must be in  $O(n \log n)$ ?

☐

True

☐

False

Question 5 1 pts

What does the following code print?

```
class Badger:
```

```
    name = "Mr. Badger"
```

```
    def __init__(self, weight):
```

```
        self.name = "Bucky"
```

```
        self.weight = weight
```

```
new_badger = Badger(15)
```

```
print(new_badger.name)
```

☐

```
new_badger.name
```

Bucky

15

Mr. Badger

## Question 6 1 pts

What does the following code print?

```
class TA:
```

```
    def __init__(self, name, favorite_numbers):
```

```
        self.name = name
```

```
        self.favorite_numbers = favorite_numbers
```

```
    def __len__(self):
```

```
        return len(self.favorite_numbers)//2
```

```
favorite_ta = TA("Elliot", [2,7,1,8])
```

```
print(len(favorite_ta))
```

1

7

## Question 7 0.5 pts

True or False, in order to call sorted on a list of custom objects, you must implement the `__eq__` method.

True

False

## Question 8 1 pts

What is the output of the following code?

```
def foo(a, b):
```

```
    while True:
```

```
        yield a * b
```

```
        a += 1
```

```
        b = a - 2
```

```
gen = foo(2, 3)
```

```
print(next(gen))
```

```
print(next(gen))
```

```
print(next(gen))
```

8

## Question 9 1 pts

```
class Rectangle:
```

```
    def __init__(self, width, height):
```

```
        self.width = width
```

```
        self.height = height
```

```
        self.area = width * height
```

```
    def calculate_area(self):
```

```
        return self.height * self.width
```

```
class Square(Rectangle):
```

```
    def __init__(self, side_length):
```

```
        # Missing line
```

Suppose we wish to call the parent class constructor of Square from within the constructor of Square. What should we replace “# missing line” with?

☐

```
super().__init__(side_length, side_length)
```

☐

```
super().__init__(side_length)
```

☐

```
Rectangle(side_length)
```

☐

```
Rectangle(side_length, side_length)
```

## Question 10 1 pts

What is the output of the following code?

```
def foo(n):  
    if n <= 1:  
        return 1  
    else:  
        return foo(n-1) + foo(n-2)
```

```
print(foo(5))
```

☐

13

☐

5

☐

15

☐

8

☐

Question 11 0.5 pts

Is this a valid BST?

☐

Yes

☐

No

## Question 12 0.5 pts

Which data structure would best help us efficiently implement **breadth-first search** in a graph?

☐

dictionary

☐

deque

☐

list

☐

data frame

## Question 13 0.5 pts

What is the output of the following code?

```
from collections import deque

todo = deque(["B", "A", "D", "C"])

todo.append("E")
x = todo.popleft()

print(x)
```

☐

B

☐

E

## Question 14 1 pts

Consider the above BST with root node **10**. In what order will the nodes be visited if we start from node **10** (the root node) and perform a **breadth-first search** for node **12**?

☐

10, 2, 15, 12

☐

10, 2, 15, 1, 4, 12

☐

10, 2, 4, 12

☐

10, 2, 1, 4, 12

Question 15 1 pts

Consider the above BST with root node **10**. In what order will the nodes be visited if we start from node **10** (the root node) and perform a **depth-first search** for node **4**?

☐

10, 2, 15, 4

☐

10, 2, 1, 4

☐

10, 2, 15, 12, 19, 1, 4

☐

10, 15, 12, 4
